Agroforestry can add a high level of diversity within agricultural lands and, with it, an increased capacity for supporting numerous ecological and production services that impart resiliency to climate change (CC) impacts (see figure below) (Verchot et al. 2007). From a

Adaptation Impacts

Agroforestry contributes to climate change mitigation in three ways.

(1) Sequestering carbon in biomass and soils, (2) reducing greenhouse gas emissions, and (3) avoiding emissions through reduced fossil fuel and energy usage on farms. For a windbreak (Figure 1), the growing trees store
