The first revision of the Collins TDR-90 manual is dated October 1973. Should a new transponder certification be performed if simply replacing an existing transponder? Yes, anytime a transponder is removed or replaced an altitude correlation between what the transponder is reporting and what is displayed on the altimeter needs to be performed.

The following Collins Radio manuals are divided into multiple sections (.pdf files) in order to facilitate faster download times. To minimize your download time, we suggest you check the "Table of Contents" files (TOC) first to see which sections of a manual you need and then download only those specific sections.

**Collins Radio Equipment Manuals | Collinsradio**

From a Rockwell Collins standpoint, the simple rule of thumb is if you have any variation of TDR below a TDR -94 -007, these units will be required to be replaced with new TDR -94 -501s. It doesn't matter if you have straight TDR -94s or TDR -94Ds (TCAS-II) applications, both apply.

**The ABCs on ADS-B - King Air**

Collins Aerospace's TDR-94D Transponder is an all solid-state, crystal-controlled receiver/transmitter specifically designed for TCAS-II-equipped business aircraft and regional airliners with 28 V DC electrical systems and limited space. It is the airborne portion of the Air Traffic Control Radar Beacon System.

**TDR-94-94D - Collins Aerospace**

In installations where two TDR-94D transponders are used, but space is not available to install four antennas, special relays can be used to operate the two TDR-94D transponders with only two antennas. This configuration can also be used to operate two TDR-94 transponders with one antenna.

Like the rest of the Collins Microline series, the Collins TDR-950 Transponder has a well-earned reputation for reliability. The TDR-950 is a full featured transponder in a compact chassis. In fact, it has the shortest depth of all transponders, making it possible to install where other units simply won't fit.
