Unfortunately, due to a DMCA (copyright) complaint from the publisher of Griffiths's textbook Introduction to Electrodynamics, I must remove my solutions to the problems. Although my solutions were actually my own work and were not copied from any published source, they probably do duplicate to some extent the solutions in the solutions manual, so I can understand why the publisher lodged the complaint.

INTRODUCTION TO ELECTRODYNAMICS

Go back to the differential equation for S ,
and put in $k = 0$: $\frac{d^2 S}{ds^2} = \text{constant}$.
 $\frac{d^2 S}{ds^2} = -\frac{1}{\lambda^2}$
 $\frac{d^2 S}{ds^2} = -\frac{1}{\lambda^2}$ (another constant).
So the second solution in this case
is $\ln s$. [How about s^3 ? That too reduces to a
single solution, ($D = A$, in the case $k = 0$.)
What's the second solution here?
