Air conditioners advice guides - Which?

Air conditioning is a system that is used for controlling the humidity, ventilation and temperature in a space. Air conditioning is primarily used for buildings and transport. Air conditioning works by using the refrigeration cycle, this is a process that changes the pressure and temperature of a substance to create cool air.

Guide to: Air Conditioning | Nauticool

There are seven major parts and pieces that make up your AC unit: Evaporator: This is where cooling coils remove heat and humidity from the air, using refrigerant. Blower: A blower circulates air over the evaporator and dispenses the chilled air. Condenser: Hot coils release the collected heat into the outside air.

Beginner's Guide to Air Conditioning | Basics of Your Home ...

Air conditioning has been linked to this substantial fall. In 1939, the first car with air conditioning was launched by Packard. However, it wasn't a big seller due to the size of the evaporator and blower system or its substantial cost. How air conditioning can help businesses meet regulations

Guide to Air Conditioning | MSE

A central air conditioner works by using your furnace or air handler fan to draw warm air in through your home's duct work. As the air is blown across the evaporator coil, which generally sits above your furnace, heat is removed from the air, cooling it down. The removed heat is absorbed into refrigerant running through the coil.

The Ultimate Air Conditioning Guide – Everything You Need ...

So for a room measuring 15x10x8 feet: 15 x 10 x 8 x 5 = an air conditioner of 6,000 BTUs. If you're concerned about how much energy an air conditioner will use, look out for one with a good energy efficiency ratio (EER). This is the ratio between an air conditioner's BTU and its the power input (in watts).

How To Buy The Best Air Conditioner - Which?

This guidance is intended to help anyone who manages or controls an air-conditioning system to understand: how the Energy Performance of Buildings Regulations (Certificates and Inspections (England...

Air-conditioning inspections for buildings - GOV.UK

Air conditioners offer increasingly sophisticated air filtration systems, to remove allergens, mould, bacteria, odours and dust from the air. This is often accompanied by a self-cleaning function to keep the inside of the unit dry and reduce the build-up of dust and the growth of mould; this also helps keep the unit running more efficiently.

How to buy the best air conditioner for your home | CHOICE

Air conditioners serve a vital purpose... cooling the air temperature inside of your home to an appropriate level. There are many different types of air conditioners out there, each with different capabilities based on the speed that the air is lowered, performance, and durability of the hardware itself.
