From products we use to clothes we wear, and spaces we inhabit, we rely on colour to provide visual appeal, data codes and meaning. *Color and Design* addresses how we understand and experience colour, and through specific examples explores how colour is used in a spectrum of design-based disciplines including apparel design, graphic design, interior design, and product design. Through highly engaging contributions from a wide range of

Read Book Outlines Theory Light Sense Ewald Hering

international scholars and practitioners, the book explores colour as an individual and cultural phenomenon, as a pragmatic device for communication, and as a valuable marketing tool. *Color and Design* provides a comprehensive overview for scholars and an accessible text for students on a range of courses within design, fashion, cultural studies, anthropology, sociology and visual and material culture. Its exploration of colour in marketing as well as design makes this book an invaluable resource for professional designers. It will also allow practitioners to understand how and why colour is so extensively varied and offers such enormous potential to communicate.

A biography of a 19th-century German scientist renowned for the co-discovery of the second law of thermodynamics and his invention of the ophthalmoscope. The

volume relates how von Helmholtz also made contributions to the fields of physiology, philosophy of science and aesthetics.

Perception has been for philosophers in the last few decades an area of compelling interest and intense investigation.

Developments in contemporary cognitive science and neuroscience has thrown up new information about the brain and new conceptions of how sensory information is processed and used. These new conceptions offer philosophers opportunities for reconceptualising the senses--what they tell us, how we use them, and the nature of the knowledge they give us. Today, the philosophy of perception resonates with ideas that had not even been articulated in the 1970s and 1980s. This Handbook is a survey by leading philosophical thinkers of

Read Book Outlines Theory Light Sense Ewald Hering

contemporary issues and new thinking in philosophy of perception. It includes sections on the history of the subject, introductions to contemporary issues in the epistemology, ontology and aesthetics of perception, treatments of the individual sense modalities and of the things we perceive by means of them, and a consideration of how perceptual information is integrated and consolidated. New analytic tools and applications to other areas of philosophy are discussed in depth. Each of the entries is written by a leading expert, some collaborating with younger figures; each seeks to introduce the reader to a broad range of issues. All contain new ideas on the topics covered; together they demonstrate the vigour and innovative zeal of a young field.

This ambitious study explores how important darkness--artificial

Read Book Outlines Theory Light Sense Ewald Hering

darkness--was, as an actual technology, in producing not just photographs but visual novelties and experiments in cinema in the nineteenth century. The study plays out against a backdrop of urban history, where most scholars have focused on the growth of artificial light and the electrification of cities. Elcott's study challenges that approach. In considering zones of darkness, it ranges from the sites of production (darkrooms, studios) to those of reception (theaters/cinemas/arcades) that shaped modern media and perceptions. He argues that, in the nineteenth century, the avant-garde was often less interested in the filmed image than in everything surrounding it: the screen, the projected light, the darkness, the experience of disembodiment. He argues that darkness has a history separate from night, evil, or the color black, and has a specifically modern manifestation as

Read Book Outlines Theory Light Sense Ewald Hering

a media technology. We are all aware of the "velvet light trap" in photography, but at the heart of this book are technologies of darkness crucial to cinema that were commonly known as "the black screen," but have, over time, faded from the storied discourse.

The Republic of Color delves deep into the history of color science in the United States to unearth its origins and examine the scope of its influence on the industrial transformation of turn-of-the-century America. For a nation in the grip of profound economic, cultural, and demographic crises, the standardization of color became a means of social reform—a way of sculpting the American population into one more amenable to the needs of the emerging industrial order. Delineating color was also a way to characterize the vagaries of human nature, and to create

Read Book Outlines Theory Light Sense Ewald Hering

ideal structures through which those humans would act in a newly modern American republic. Michael Rossi's compelling history goes far beyond the culture of the visual to show readers how the control and regulation of color shaped the social contours of modern America—and redefined the way we see the world.

First published in 1945, Maurice Merleau-Ponty's monumental *Phénoménologie de la perception* signalled the arrival of a major new philosophical and intellectual voice in post-war Europe. Breaking with the prevailing picture of existentialism and phenomenology at the time, it has become one of the landmark works of twentieth-century thought. This new translation, the first for over fifty years, makes this classic work of philosophy available to a new generation of readers. *Phenomenology of*

Read Book Outlines Theory Light Sense Ewald Hering

Perception stands in the great phenomenological tradition of Husserl, Heidegger, and Sartre. Yet Merleau-Ponty's contribution is decisive, as he brings this tradition and other philosophical predecessors, particularly Descartes and Kant, to confront a neglected dimension of our experience: the lived body and the phenomenal world. Charting a bold course between the reductionism of science on the one hand and "intellectualism" on the other, Merleau-Ponty argues that we should regard the body not as a mere biological or physical unit, but as the body which structures one's situation and experience within the world. Merleau-Ponty enriches his classic work with engaging studies of famous cases in the history of psychology and neurology as well as phenomena that continue to draw our attention, such as phantom limb syndrome, synaesthesia, and

hallucination. This new translation includes many helpful features such as the reintroduction of Merleau-Ponty's discursive Table of Contents as subtitles into the body of the text, a comprehensive Translator's Introduction to its main themes, essential notes explaining key terms of translation, an extensive Index, and an important updating of Merleau-Ponty's references to now available English translations. Also included is a new foreword by Taylor Carman and an introduction to Merleau-Ponty by Claude Lefort. Translated by Donald A. Landes.

A comprehensive history and A-Z bibliography of books on colour published in European languages between 1495 and 2015 on all branches the arts, sciences, education, design and technology. An invaluable reference for locating information and research into colour
